FAST, EFFICIENT, CLEAN MILKING

Known for its fast, clean milking characteristics the Waikato Milking Systems Supa4 has out performed and out sold all others in its class.

The Supa4 has been designed and engineered to meet the needs and expectations of modern milking and the demands of farmers today. An installation process standardised across the entire Waikato product range guarantees the overall integrity of the system and provides an assurance to you of a quality product.

The Supa4 design calls for a single 100mm milk-line draining into a receiver mounted at one end of the pit. A large 100mm milk line ensures cluster vacuum is maintained at an optimum level at all times and totally eliminates milk line flooding. With a modern electronic pulsation system, milking is both fast and uninterrupted.

The unique mounting system for a Supa4 accommodates a wide range of accessories including Swing Arms, Swing-down Cluster Washers and much more.

Milkline mounting position

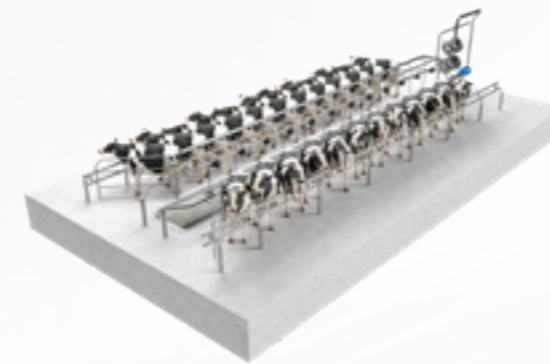

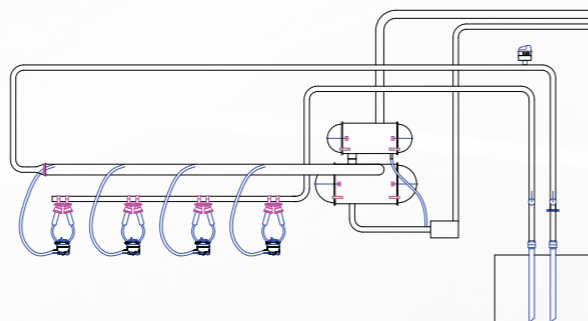

Supa4 is typically a mid mounted milking system designed initially for use in a swing-over parlour.

A Hurricane Slug Wash System is the best cleaning system of its type and comes standard on all Supa4s. Unique features incorporated into the design ensure the 100mm milk line is maintained at the highest hygiene level taking full advantage of a totally enclosed wash system.

End mounted receiver group

Mounted at the end of the pit and with unique domed perspex covers that provide a great visual check.

FASTER MILKING

GREATER EFFICIENCIES

POWERFUL CLEANING

“
We’re very happy with our new dairy - it’s simple, efficient and streamlined. Anyone could milk in it.
”

Bruce & Aidan Lundie
Canterbury, New Zealand

A Supa4 milks faster, milks more efficiently and cleans up more effectively than any other. With a well-earned reputation for more than 25 years Supa4 has served the dairy industry well. Waikato Milking Systems Supa4 is a recognised leader and has proven over time to be the mid-line swing-over of choice for customers around the world.
